

FOR IMMEDIATE RELEASE

CASPA Chooses FAMCare Case Management Software to Help At-Risk Kids and Families

March 20, 2016 St. Louis, MO – CASPA (Child and Adolescent Specialist Programs and Accommodation), an Australian agency that supports and rebuilds the lives of children in foster care, and at-risk children and their families, has partnered with Global Vision Technologies, Inc. (GVT) to implement FAMCare human services software for their foster care and case management needs. The goal of FAMCare will be to help with structured information collection and analysis as they work with children and adolescents with complex needs and problems.

FAMCare, Rapid Case Management Software – is GVT’s flagship software platform designed to streamline human services data management. FAMCare will enhance data collection, information management, and strategic reporting needed to deliver the best care to the vulnerable children and adolescent population in Australia.

“The team at GVT has been excellent in their level of support and customer service. I did a world-wide search for the best system, with the flexibility to meet our needs, and I have been re-assured since implementing FAMCare human services software that this is the best option” said, Todd Yourell, CEO of CASPA.

“We look forward to working with the CASPA team and supporting the great work they do for the vulnerable kids and families they help. FAMCare will provide CASPA with a strong foundation for managing and executing on their foster care, community care and residential care programs. We will be helping CASPA to integrate and leverage FAMCare’s workflow tools to improve the productivity for their case manager teams, helping them make the right decisions when needed, said George Ritacco, Executive Director Client Services for GVT.”
